

# Flush Valve

---

## Features:

- Equipped with a stopper for the cap to prevent snap-out of the cap while flushing, a special provision is made for the cap.
- Large opening provided to take out dirt from the pipeline.
- Threaded facility to open for ease of flushing dirt from the sub main.
- Special 'o' ring provided for leak-proof performance.
- Flush out sediment and debris (like dirt and mineral deposits) that accumulate over time.
- Prevent clogging of the emitters.
- Maintain uniform water flow and efficiency across the entire system.

## Sizes:

- 40x50mm.
- 63x75mm.
- 90mm.

## Applications:

- Suitable for flushing the entire drip irrigation system & water supply line.
- Recommended in micro/drip irrigation as a flush valve to remove the entrapped dirt from the pipeline during flushing.
